

High-intensity Focused Ultrasound (HIFU) cancer treatment device

■ In the field of medical and physical chemical device, we have experience in automating “sample testing” and are expanding into “treatment” area using robot technology.

- ▶ We have a partnership with Sonia Therapeutics Co., Ltd. (hereinafter referred to as Sonia) in the field of medical and physical chemical device.
- ▶ We conduct joint development of a cancer treatment device for clinical trials (human clinical trials) (The target is inoperable pancreatic cancer) .
- ▶ We develop a device of minimally invasive treatment that does not require skin incision or organ resection.
- ▶ We have delivered the device to multiple domestic hospitals and are conducting domestic clinical trials at Sonia. We are also providing after-sales service following the delivery.
- ▶ We aim to enhance the safety, usability, and medical-oriented design of the device. We will focus on developing mass-production devices and establishing a mass-production system.
- ▶ We are planning to expand our business overseas and aim to achieve early delivery to overseas hospitals and provide after-sales service through our overseas branches.
